Subject: RE: Blades Remedial Investigation/ PFAS Sampling

Okay. Once this Site is listed to the NPL, I am intending to sample residential wells for PFAS because part of the Site Investigation found PFAS contamination.

There will almost certainly be results exceeding the HAL because currently the State is providing treatment units (cheap 20 dollar units) to residents who exceeded the HAL (8 residences).

My first step would be submitting the consult form to OSTRI then if you could send that (sorry if you have already I cant find it). We should also prepare for the 2nd consult because this will be part of the early Remedial Investigation.

Dan,

The initial step is the submission of the consult form to OSRTI. If we are going to sample residential or public wells, OEM (Emergency Mgmt) and OSRTI require a 2nd consult to discuss our contingency plans if sample results exceed the HAL.

Subject: Blades Remedial Investigation/ PFAS Sampling

Hey Joe,

We talked about this several months back. Blades is currently going through the process of being listed to the NPL, likely being listed beginning of September. A big part of this Site is PFAS. During the Site Assessment Program, PFAS was found in public and private wells, where emergency response actions occurred to provide treatment units to residents and install a carbon unit on the public well.

I'm giving you that quick synopsis because based on our conversation, headquarters needs to know in advance if we plan on sampling for PFAS. Since this Site is driven by PFAS, I wanted to make sure I was doing the steps necessary. I think a while back you sent me a form that goes to headquarters.

Could you remind me of the steps I need to take so when this is listed I am given the green light to sample for PFAS?

Thanks!
